CHEMICAL EXPOSURE SHOWER

This ingenious shower system can be used at any outside site requiring the wash down and capture of contaminated materials and is automatically operated by turning on the shower.

IAPMO IGC 234 2016
File Number 16834

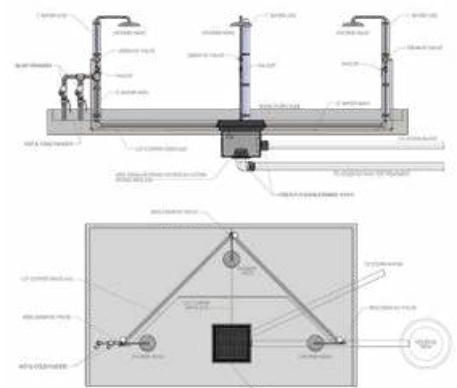

Model WDS-CES

The Process

When a shower is turned on, the transfer valve will open transferring to the holding tank.

When all showers are turned off, the transfer valve will close and all rain water will flow to storm water.

The system operates automatically on the available water supply (no reliance on electric).
